Act 1: The Garbage Freighter

Route, points and example screens. Playable from the first screen to the escape.

Escape pod

Open the wall locker and take the pod manual (it explains the ship's computer: engines first, radar before takeoff, front shields before firing). Read it with Look. Then open the airlock hatch.

Garbage mountain (5 points)

Pick up the wire. Go east to the robot head.

+5 Get the wire from the space tanker

Robot head (5 points)

Use the broken eye to climb in and see the Mallard's open panel. Don't touch the chasm or the metal plate. Go back and south.

+5 Climbing through the metal robot's broken eye

Conveyor (5 points)

A clock is running: the crusher is coming. Use the trash bucket to be carried up to the rail.

+5 Getting into vertical trash bucket

Overhead rail (45 points)

Use the rail to jump up, then Use the grabber to climb on. Click along the rail to ride it. At the pedestal (left) Push the grabber to lift the warp motivator; ride to the ship's open panel (right) and Push again. Get off, then Use the blue chute at the left end of the rail.

+10 Jumping up to the rail
+15 Getting the motivator with the grabber
+15 Installing the motivator in the ship
+5 Falling through the garbage chute

Reactor cavern (10 points)

Another clock: the rat. Pick up the portable ladder, then Use the iron ladder to climb to the crane cabin.

+10 Getting the ladder from the rat's lair

Crane cabin (15 points)

Push the stick until the reticle is over the reactor pit, then Push the red button to grab the reactor. Push the stick again to move to the construction bay and Push the button to drop it. Then use the hatch to climb down.

+15 Getting the reactor from the rat's lair

Construction bay (25 points)

Pick up the reactor. Use the ladder with the ship, Open the top hatch, then Use the reactor and the wire with the engine panel. Open the ramp to board.

+5 Using the ladder to get to the top of the spaceship
+10 Opening hatch and entering the spaceship
+5 Installing the reactor
+5 Installing the wire

Cockpit (35 points)

Use the pilot's seat to search it for buckazoids. Use the computer: switch on Engines and Radar, then Takeoff; turn on Weapons and Front shields, then Fire. Radar off or shields off is fatal.

+10 Finding buckazoids by searching the pilot's cushion
+25 Safely escaping the trash freighter

Act 1 total: 145 points (of 738)

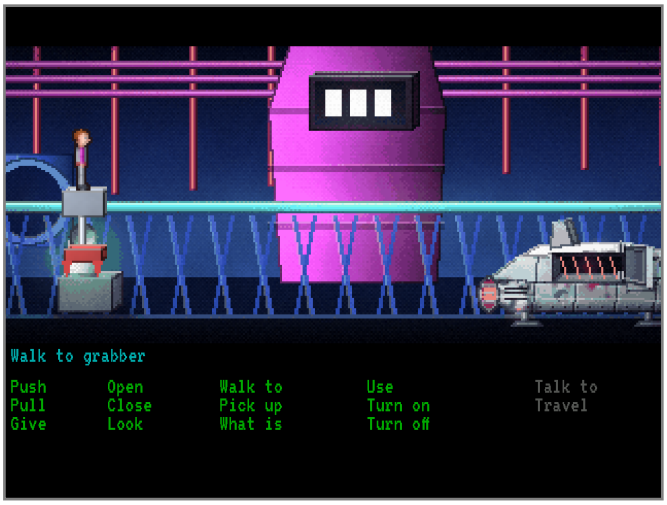

Deaths in this act, each with its own painted picture: the chasm, the metal plate, the crusher (too slow), stepping off the rail, the rat (too slow), taking off without radar, switching the engines off in flight, and firing without front shields. The game checks the whole route from the first screen to the escape: all 15 events, exactly 145 points.

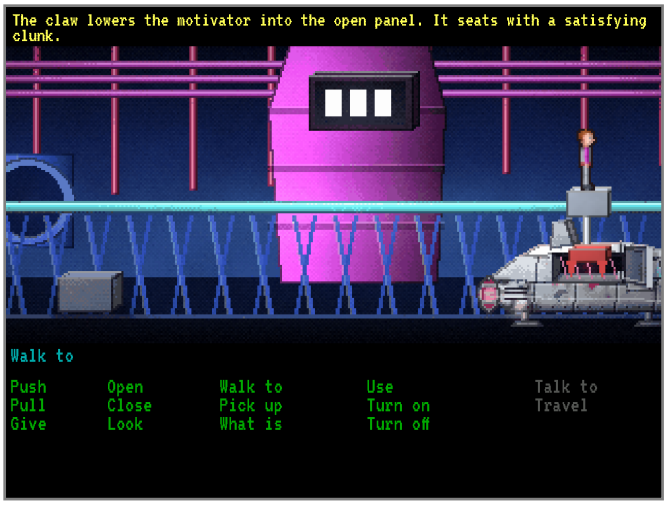

The escape pod: Roger in his original suit, the locker open with the manual on the shelf.

Conveyor: the clock is running. The trash bucket (left) is the way up.

Overhead rail: Roger rides the grabber to the pedestal.

The motivator, lowered into the Mallard's open panel.

Reactor cavern: the portable ladder, and something breathing.

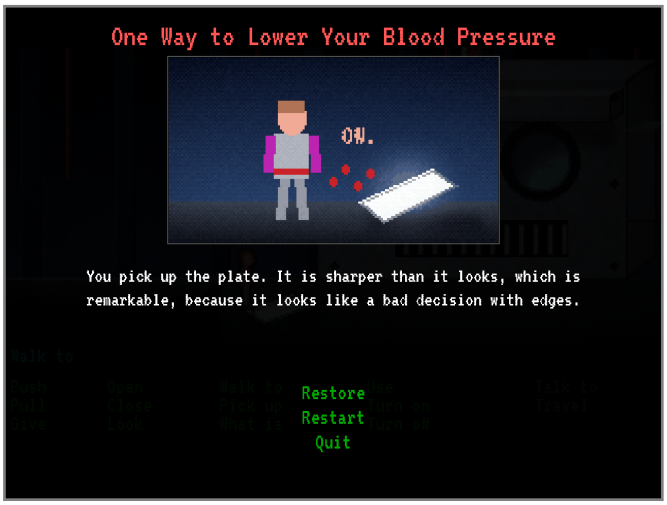

Crane cabin: the reticle hovers over the reactor pit.

Construction bay: the ladder is up and the reactor is on the deck.

The ship's computer: Engines, Radar, Weapons, Takeoff.

One of the deaths, now with its own picture.
