Space Quest III - LucasFilm-style remake

Room gallery: every area in the game as it appears on screen

Each screenshot is taken from the running game: the 640x480 view with the speech strip on top and the verb grid and inventory underneath, in the style of the Lucasfilm Games interface. The scenes are painted at 320x144 pixels with gradients, lighting and texture, reduced to a 190-colour palette and shown at 2x. Each planet has its own palette. It is a draft to work from, not final art: some rooms (the escape pod and all Act 1 rooms, rebuilt from the original screens) are more finished than others (the hangar, the cell block). Roger is a placeholder sprite. Objects listed under each screen can be examined in the game; exits lead to the rooms named.
